Full-Stack Software Engineer Summary

I am a software engineer and problem solver with a background in education that will streamline your business processes necessary to maximize your profits. I want to further improve the communication between individuals to further enhance our means of success. I offer precise communication and constant updates. Furthermore, I am able to explicitly explain the steps required to make your business/product catered to you. I find great satisfaction being able to explain complicated and abstract problems which are crucial in assisting people to accomplish their goals.

Skills

Front-End Technologies	HTML, CSS, Javascript
Back-End Technologies	PostgreSQL, MongoDB(noSQL), Express, Node.js, Ruby
Frameworks	Rails, React

Projects

[face-less](#)

This is a full stack application created with Mongoose, Express, React, and Node.js with a custom database. This website allows users to post anonymously, upvote/downvote threads made by others(also anonymous users), and comment. This website encourages people to contribute to the community in order to view the content whilst including a pseudo login feature.
